

Turn-Key eDiscovery

Level the Legal eDiscovery Playing Field

► BENEFITS OF TURN-KEY eDISCOVERY

- Levels the eDiscovery playing field
- Gives you access to the best, advanced eDiscovery infrastructure available.
- Removes the burden of provisioning, deploying, and maintaining eDiscovery infrastructure.
- Puts the Capax Discovery team of eDiscovery veterans on your side.
- Allows your team to focus on the legal work, not the adminis-trivia.
- Eliminates the dependence on internal IT resources
- Predictable eDiscovery expenses with no per-GB, per-click, per-anything surprises.

ABOUT CAPAX DISCOVERY

Capax Discovery, a division of Capax Global, offers the only SaaS Hosting eDiscovery platform based on Autonomy Introspect software. We are an Autonomy Premiere Partner with extensive experience implementing, optimizing, and supporting Autonomy-based eDiscovery solutions for Fortune 500 and FTSE 350 companies

► MEET eDISCOVERY CHALLENGES WITHOUT BREAKING THE BUSINESS

Dealing with electronic discovery can be overwhelming and expensive. The purchase and deployment of eDiscovery tools adds complexity and cost to your business. With today's complex software, just having the right tool is no guarantee that it will perform the way it's supposed to when you need it most. Going up against larger companies who have invested a significant amount of money in sophisticated eDiscovery solutions and experts can be intimidating and expensive. You'd like to have the best legal tools on your side, but your business cannot afford an eDiscovery arms race.

LEVERAGING A PRIVATE-CLOUD-BASED SaaS SOLUTION

Capax Discovery offers a turn-key eDiscovery platform designed to meet your legal challenges head-on using Introspect, the world's leading eDiscovery software from Autonomy. We offer Software-as-a-Service (SaaS) hosting to make it affordable and easy to manage and use. Our leasing terms make it easy for you to predict your eDiscovery costs and budget because there are no per-click, per-GB, per-page, or professional services charges for using the platform.

- Runs on private, dedicated hardware specifically configured for each client.
- Architected to support simultaneous usage during processing, review, analysis, and production phases of the EDRM model.
- Built-in advanced eDiscovery features such as meaning-based computing, concept-searching, graphical analytics, TIFF and OCR on the fly, predictive coding.
- All application features and functions are available for direct use by client's eDiscovery team, including data loading, searching, filtering, culling, analysis, review, and production.
- Operated from our secure world-class, state-of-the-art, SAS-70 compliant, datacenter. Round-the-clock staffing, fully-redundant connectivity, and diesel generators support continuous operation.
- Optionally, can be located on premises at client's location and remotely managed by Capax.
- Platform is pre-configured, tested, and monitored in terms of processing power and storage utilization to maintain proper capacities to hold ESI, achieve specified processing rates, and maintain user responsiveness.
- Capax performs all system updates, upgrades, and periodic backups behind the scenes to properly maintain the system.
- Capacities are easily reconfigurable to meet changing demands.
- Capax eDiscovery experts can augment internal staff during heavy workloads to provide "overflow assistance" and to advise on usage best-practices on as needed basis.
